Discovery of America by Columbus.

First voyage

Columbus, it seems, was born at Genoa in 1452, and will ever remain one of the most distinguished honours of that state. His father it is supposed was a wool-comber, and that himself was first destined for the same occupation. Be that as it may, however, it appears that he studied mathematics with assiduity and success at the university of Pavia.

The correct idea this great mind had conceived of the terraqueous globe, gave birth to his design; but the imperfection of all the maps then to be consulted, made him mistake the object. He proposed to find a nearer passage to the Indies and China, by sailing westward.

Being defeated, both in application and adventure, one would suppose that he would have given all up as lost. But he still persevered; for he was not to be depressed. He now repaired to Castile, and offered his services to Ferdinand and Isabella. He submitted to delay and insults for eight years before the queen Isabella could be prevailed upon to accede to the demands of Columbus. This patient projector was now raised to the rank of admiral. His fleet consisted of the Santa Maria, carrying the admiral's flag; the La. Pinta; and the La. Nina. The fleet being furnished with provisions, and other necessaries, and manned with 90 men,

Aug. 3^d.
1492.
90-men

Set sail on Saturday the 3^d. of August, 1492. This was an expedition pregnant with the fate of both worlds. On the Thursday following they made the Canaries. Here the Admiral improved his fleet; and having laid in provisions, wood, and water they set sail from Gomera on the 6th of Sept., standing to the westward with a lite wind. They sailed along on this course for many days without in reality discovering land; until the crew became so impatient that had there not appeared frequent signs of their being in the vicinity of land, they would have risen in open rebellion, and destroyed the Admiral. They once proposed to throw his

overboard, and to pretend, on their return, that he casually fell into the ocean, while intent on some observations. The Admiral was not ignorant of this mutinous disposition; and he exerted himself that it might not break out into open violence. Imperfect signs of land alternately appeared and vanished again, until the 11 of ~~Sept~~ Oct., when the most obstinate and incredulous among them were convinced that land was not far distant. Having now reached the land, they knelt down, thanking God, and kissing the earth with tears of joy. The Admiral gave this Island ^{the name of} St. Salvador, now Cat-Island - one of the Bahamas - and took possession of it with the usual solemnities for their Catholic Majesties. Quitting this Island, when proceeding about seven leagues he reached the western extremity of another island, about ten leagues long, to which he gave the name of St. Mary of the Conception.

Howard Daniel Clark LL.D. in his travels in Greece gives an account - not very particular - but somewhat curious of some apartments in the City of Constantinople. Particularly of the apartment for the women, called Seraglio. It was with great difficulty - and not without dangers of life - that he entered this apartment. The women are not permitted to be seen by foreigners. He represents them as being attired in the most costly and splendid apparel.

The description of Egypt: With an account of what is most curious and remarkable in that country.

Hollin's Egypt comprehended anciently, within limits of no very great
ancient extent, a prodigious number of cities, and an incredible
History: numbers or multitude of inhabitants.

1. 206. 147 P. It is bounded on the east by the Red Sea and the Isthmus of
Suez; on the south by Ethiopia, on the west by Lybia, &
on the north by the Mediterranean. The Nile runs from
South to North, through the whole country, about 200 leagues
in length. The country is enclosed on each side with ^aridge
of mountains, which very often leave, between the foot of the
hills, and the river Nile, a track of ground, of not above
half a day's journey in length, and sometimes less.

Ancient Egypt may be divided into three principal parts;
Upper Egypt, otherwise called Thebais, which was the most
Southern part, Middle Egypt, or Heptanomis, so called from
148. P. the seven Nomi, or districts, it contained; Lower Egypt,
which included what the Greeks called Delta, and
all the country as far as the Red Sea, and along
the Mediterranean to Rhinocolure or Mount Casius.

Anciently, Thebes was not only the largest city in all
Egypt, but was thought to vie with any in the world.
So august were the remains of this city, that the Romans,
who never beheld it only in its degeneracy or ruins,
celebrated its magnificence and grandeur.

It appears that the Egyptians worshipped crocodiles, not-
withstanding their great wisdom in other respects, as gods.
And erected Labyrinths not simply for the burying places
of their kings, but also for the sacred deposit of those

The height of creatures they worshiped as deities. The Nile serves
the inundation both to nourish and protect Egypt it meanders through the
of the Nile 18. heart of the country. This magnificent river takes its
course - our
measure 24 ft. rise at the foot of the mountains in Abyssinia. The
cause of the inundation of this river, is the great rains which
fall in Ethiopia, from whence it flows.

Description and curiosities of Egypt.

Worship. In Heliopolis, a city, it was that an ox, under the name P. 155. v. of Mnevis, was worshipped as a god.

" 158. v. In the city of Alexandria the arts and sciences were industriously cultivated. The famous library, which was considerably augmented Ptolemy Philadelphus, and which at Alexan^a by the munificence of the kings his successors, at last 700. 000 vols. contained 700. 000 volumes. In Cesar's wars with the Alexandrians 400. 000 vols. of this library were unhappily consumed by fire.

WISDOM Egypt was ever considered, by all the ancients, as the most renowned OF EGYPT schools for wisdom and politics. Greece was so sensible of this, says the historian, that its most illustrious men, as Homer, Pythagoras, Plato; and even its great legislators Lycurgus and Solon with many more, travelled into Egypt to complete their studies, and to draw from that fountain whatever was most rare and valuable.

Government THE Egyptians were the first people who rightly understood the rules of governments. A wilful murder P. 159. v. 1. was punished with death - which, in point of humanity and equity, gave their law, in this respect, a superiority over that of the Romans; which gave the Master an absolute power as to life and death 173. P. over his slave. Perjury also met the same fate.

Polygamy. Polygamy was allowed in Egypt, except to priests, who could marry but one woman.

Priests & Priests were exempted from all taxation. It is to Egypt. Religion. that Pythagoras owed his favourite doctrine of the Metempsychosis 174 & 175 P. or transmigration of souls the Egyptians believed, that at the 174 & 175 P. death of men their souls transmigrated into other human bodies; and that if they had been vicious, they were imprisoned in the bodies of unclean or unhappy beasts, to expiate in them their past transgressions; and that after a revolution of some centuries, they again animated other human bodies.

Continued: and the history of the carthaginians

Commenced.

P. 178 vols. Never were people more superstitious than the Egyptians.
 Idolatry. The Egyptians worshiped a great number of gods of different orders and degrees, as the ox, dog, wolf, hawk, ibis and the cat; but we shall take notice only of two which were almost universally adored - Osiris & Isis, which are thought to be the Sun and moon. Some of those animals named above were the objects only of some of the superstitions of some particular cities. This gave rise to wars, which frequently arose between one city and another in that country.

"Who has not heard where Egypt's realms are nam'd,
 What monster gods her frantic sons have fram'd?"

"Religious nations, sure, and blest abodes,
 Where every orchard is o'erum with gods."

Funerals. For an account of Funerals see Vol. I. P. 181. Sec. II.

Wars. Do ... of Soldiery & war." 184. do III.

Kings. The history of the Kings of Egypt Vol. I. 197. P. Part 3. & so on.
 Rollin's informs us, that no part of ancient history is more obscure or uncertain than that of the first Kings of Egypt. This proud nation, fondly conceited of its antiquity and nobility, thought it glorious to lose itself in an abyss of infinite ages, as though it seemed to carry its pretensions backward to eternity.

P. 199. But, says the author, Historians are unanimously agreed that Menes was the first king of Egypt.

P. 230 The carthaginians were indebted to the Tyrians, not only for their origin but their manners, language, customs, laws, Book 2. religion &c. They spoke the same language with the Tyrians, Vol. I. the canaanites and Israelites; which was the Hebrew; or at least a language entirely derived from it.

Religion. It appears from several passages of the history of Carthage, that its generals looked upon it as an indispensable duty to begin and end all their enterprises with the worship of the gods.

History of the Carthaginians, continued.

Vol. 1.

- P. 232. In a peace concluded between Philip, son of Demetrius, King of Macedon and the Carthaginians, we shall receive some idea of their theology: "This treaty was concluded in the presence of ~~the~~ Jupiter, Juno, and Apollo; in the presence of the demon or genius of the Carthaginians, of Hercules and Iolaus; in the presence of Mars, Vulcan and Neptune; in presence of all the confederate gods of the Carthaginians; and of the Sun, the moon, and the earth; in the presence of rivers, meads, and waters; in the presence of all those gods who possess Carthage."
- P. 232. The deity particularly adored by this people, and in honour of whom, human sacrifices were offered, was Saturn, known in Scripture by the name of Moloch; and this worship passed from Tyre to Carthage. Philo quotes a passage from Sanchoniathon, which shows that the kings of Tyre, in great dangers, used to sacrifice their sons to appease the anger of the gods; and that one by this action, procured himself divine honours, and was worshiped as a god, under the name of the planet Saturn: to this doubtless was owing the fable of Saturn's devouring his own children. Particular persons, when desirous of averting any great calamities, took the same method; and in imitation of their princes, were so superstitious, that such as had no children purchased those of the poor in order that they might not be deprived the merit of such sacrifice. It seems also that this custom long prevailed among the Phoenicians and Canaanites. At first children were inhumanly burned, either in a fiery furnace like those in the valley of Hinnom, so often mentioned in Scripture, or in a flaming statue of Saturn. The cries of these unhappy victims were drowned by the uninterrupted noise of drums and trumpets. Mothers made it a merit, and a part of their religion, to view this barbarous spectacle with dry eyes, and without so much as a groan;

Continued.

and if a tear or a sigh stole from them, all the effects of the sacrifice were entirely lost. Diodorus, remarks, P. 235. that to atone for a certain crime two hundred children, of the best families in Carthage, were sacrificed to Saturn; beside which upwards of three hundred citizens, from a sense of their guilt, voluntarily sacrificed themselves. "Can this, says Plutarch, be called worshipping the gods? Can we be said to entertain an honourable idea of them, if we suppose that they are pleased with slaughter, thirsty of human blood, and capable of requiring or accepting such offerings?" But I would myself remark here, that this inhuman heathenish idolatry or barbarity, is nothing to be compared ^{with idea of endless misery}, neither does it detract so much from the honours of those gods who require this sacrifice, as does that system of religion, instituted in christian lands, which represents that the God of heaven and earth has created millions of human beings with the certain knowledge that they will become endless sufferers by their existence, ~~and~~ from the dignity, honours and goodness of our Father in heaven!" NUM 22.

Government For an account of the government of Carthage see - P. 236, and so on. P. 253. Description of Carthage. Carthage in Africa, was a colony from Tyre, the most renowned city at that time for commerce in the world. Authors disagree very much with regard to the era of the foundation of Carthage. It existed a little above 700 years. It was destroyed in the 603 year of Rome, 3859 of the world, and 145 before Christ. The foundation, therefore, may be fixed at the year of the world 3158 when Joash was king of Judah, 98 years before the building of Rome, and 846 before our Saviour. The foundation of it is ascribed to Elise, a Tyrene prince, better known by the name of Dido. I will here relate what, would at least in our day, be considered a very remarkable way of ascertaining the boundary line between two cities. A great dispute having arisen between Carthage & Cyrene on account of their respective limits, it was agreed on each side that two young men should set out at the same time

Continued.

257. P. from either city, and that the place of their meeting should be the common boundary of both states. The Carthaginians made the most haste; and their antagonists, pretending that foul play had been used, and that these two brothers had set out before the appointed time, refused to stand to the agreement, unless the two brothers, to remove all suspicion of their unfair dealing, would consent to be buried alive in the place where they had met - they acquiesced with the proposal; and the Carthaginians erected, on that spot, two alters to their memories; and paid them divine homage or rather honours in their city.

Spain Conquests of the Carthaginians in Spain.

251. P. It is not exactly known in what period they entered Spain, nor how far they extended their first conquests. It is observed, by the historian, that although Spain was the first province which the Romans invaded on the continent it was the last they subdued; and was not subdued until upwards of 200 years, vigorous opposition.

Sicily Sicily is the largest and most considerable island in the Mediterranean. When in possession of nearly all Sicily in consequence of the plague the Carthaginian army were entirely defeated, with awful distinction. But again they invaded Sicily, and by their great success obtained an honourable peace - which left them in possession of all they had conquered in the island, which was very considerable.

Cyrus King of Persia.

Vol. 2. 174. Cyrus was the son of Cambyses, king of Persia, and of Rollin's Mandana, daughter to Astyages, king of the Medes. Ancient Cyrus was beautiful in his person, and still more lovely History. for the qualities of his mind; was of a very sweet disposition, full of good nature and humanity, and had a great desire to learn, and a noble ardour for glory. He was never afraid of any danger, or discouraged by any hardship or difficulty, where honour was to be acquired. -- At the birth of Cyrus the Persians consisted of twelve tribes, and inhabited only one province of that vast country, which has since borne the name of Persia, and were not in all above 120,000 men. But this people having afterward, through the wisdom and valour of Cyrus, acquired the empire of the east, the name of Persia extended itself with their conquests and fortune, and comprehended all the vast tract of land which reaches from east to west, from the river Indus to the Tigris, and from north to south, from the Caspian Sea to the Ocean. Cyrus surpassed all of his age, not only in aptness to learn, but in courage and address in executing whatever he undertook.

An account of Temperance. Cyrus had a high sense of the importance of temperance for present enjoyment of health &c. in a youth. When but 12 years old he charmed his grandfather, Astyages, with his sprightliness and wit, and gained every body's favour by his noble and engaging behaviour. On a certain occasion he acted in the capacity of a cup-bearer to the king his grandfather: "I am mighty well pleased, my dear child said the king; nobody can serve with a better grace, but you have forgot one essential ceremony, which is that of tasting." "No," replied Cyrus, "it was ~~not~~ through forgetfulness, that I omitted that ceremony." "Why then," says Astyages, "for what reason did you do so?" "Because I apprehended there was poison

Continued.

in the liquor." "Poison child! How could you think so?" "Yes
 Vol. 2^d. poison papa, for not long ago, at an entertainment you
 178 P. gave to the lords of your court, after the guests had
 drank a little of that liquor, I perceived all their heads
 were turned; they sung, made a noise, and talked they
 did not know what; you yourself seemed to forget
 that you were king, and they that they were subjects;
 and when you would have danced, you could not
 stand upon your legs." "Why," says Astyages, "have
 you never seen the same thing happen to your father?"
 "No, never," says Cyrus. "What then? How is it with him when
 he drinks?" "Why, when he has drank, his thirst is quenched
 and that is all." I have noted this on account of the
 excellent lesson of sobriety it contains - and more remar-
 kable on account of Cyrus' youth.

When Cyrus was about sixteen years of age, he took the
 179 P. field, with his grandfather, against the king of the Babylonians,
 here he served his apprenticeship in war. He behaved himself so
 well on this occasion, that the victory which the Medes gained
 over the Babylonians was chiefly owing to his valour.

The most glorious battle which is recorded in ancient
 history, is supposed to have been fought, in Marathon,
 Vol. 3.^d between the Persians, with an army of 500,000 men, and
 the Athenians, with an army of 10,000 men. The Grecians
 159 to not only got the advantage of so powerful an army,
 in 193 P. but, also, put the whole body of them to flight. The Persians
 had 6000 slain while the Athenians had but 200 killed.

Geology.

Geology has for its object the structure of this globe, and also its formation. It of course embraces the materials of which it is composed, or rather the consideration of those materials. Together with all the material changes it is supposed this earth has undergone, since its first formation. On all or nearly all these particulars we find the opinions of the ancient geologists to differ widely. Three fifths of this globe is supposed to be covered with water. And it is the opinion of many, who have written on the subject, that the whole earth has been, at some period of time, completely inundated with water. Supposed to have taken place when the old world was drowned.

Geometry, in its original sense, relates
simply to the measurement of the earth, and was invented
by the Egyptians, whose lands being annually inundated,
required frequently to be measured out to the respective
owners so that each might repossess his property.
This science is very useful - and in fact, indispensable
in measurement of circles, semi-circles, Squares &c &c.
For an explanation of this science see Nicholson's Encyc^{lo} Vol 5. &c.

HANDS HYMN

Andante, ma deciso, con finta forte

When dust breaks from his throne, and from his throne

When the Lord Restore, the glorious name of his name

400. 004. 001
